

Ringtail can now provide intumescent fire hoods for its range of recessed fittings. Ceilings in commercial buildings are subject to fire regulations and where applicable the ceiling construction needs to be fire rated. When a hole is cut in the ceiling for a light fitting the integrity and its ability to perform in a fire can be significantly reduced. To combat this a fire hood is required to restore the ceilings fire rating. When used with a Ringtail fitting the hood will provide maximum protection and has been developed for ease of installation.

- 60 Minutes fire protection
- Fully ventilated for heat dispersal
- Acoustic range for sound absorption
- Independently tested to BS476 Parts 22, 23 and 23 clause 5 (1987)

Fire hoods available for all recessed fittings including.
