

BRAVDEN^{OBI}

REALISTIC AND REPRESENTATIVE CPR TRAINING

Compliant
with ARC,
AHA & ERC
Guidelines

Helping to improve outcomes from
cardiac arrest in diverse communities...
one heart beat at a time.

A CPR manikin representing an adult black male with anatomically correct features for realistic ventilation and compression training.

- Builds confidence
- Promotes understanding
- Aids knowledge retention

INNOSONIAN

Brayden OBI Advanced

Illuminating CPR

Three interrelated sets of LED lights within the manikin give real-time feedback on CPR performance. Brayden's advanced sensors, which can be switched to AHA or ERC Guidelines as required, detect and analyse the effectiveness of CPR – Depth, Rate and Recoil.

Brayden OBI lights and what they mean...

The manikin's indicating lights correspond to CPR performance providing instant feedback, thereby allowing for immediate correction and practice of correct CPR techniques.

"The light effects to show likely sufficient coronary and cerebral flows is novel and will be an effective stimulus for improving the quality of compressions."

Prof. Douglas Chamberlain

Correct Technique

The brain will only illuminate with correct compression depth, compression rate and full chest release

Compression depth too shallow

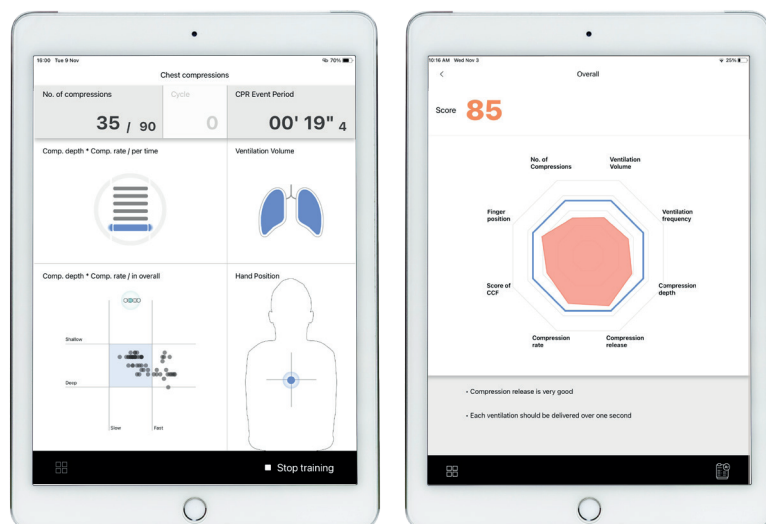

Compression rate too slow

Compression rate too fast

Brayden OBI Pro

Brayden Pro is an award-winning range of CPR manikins, which with **Brayden Online** provides a training system designed to meet the needs of CPR instructors and trainees in a variety of educational settings.

Real-time feedback on key CPR parameters can be reviewed and analysed to help improve the quality of CPR showing compression depth, rate and recoil over time and multiple practice cycles, as well as ventilation volume and hand position.

Multiple debriefing opportunities help to improve the development and retention of quality CPR performance with numerical scores against a theoretical perfect score to highlight improvements required to meet professional standards.

Brayden Pro is available to use with Brayden Online via iOS (iPad) and Chrome.

The Smarter Way to CPR Excellence

- Objective Feedback
- Instructor-led Learning
- Self-directed Learning
- Remote Learning (NEW)
- Customisable Training

***Did you know?**
OBI is a word of
Nigerian origin
and means 'heart'.*

Brayden OBI Conversion Kit

The simple conversion kit which includes an adult chest and face skin easily transforms your current Brayden Advanced and Brayden Pro manikins into Brayden OBI.

Compatible with Brayden IM13 and IM16 manikins.

(* manikin base is sold separately)

Cost effective CPR training that is inclusive and relevant in multicultural communities.

- **Anatomically accurate**

Nasal and mouth features representative of a black adult male for realistic ventilation training.

- **Cost-effective**

A single manikin which is easy and quick to convert, using interchangeable white and black chest and face skins allowing for diversity within your training programs.

- **Easy to use for AED training**

Reduced pad adhesive marking makes training more realistic and eases manikin cleaning.

- **Latex-free and durable material**

- **Developed in collaboration with key global opinion leaders**
