

# MODUM FIRE ESCAPE LADDER

The Modum ladder is one of the safest fire escape ladders and offers superb quality and performance. The ladder is TÜV certified and GS marked and endorsed by a number of European insurers.

## The Folding Mechanism

In an emergency this permanently installed fire escape ladder changes from a slim, drainpipe-like shape into a safe and sturdy means of escape. By leaning out of the window and pulling a lock-pin the ladder folds out and transforms into a solid fire escape ladder. This escape ladder is easy to climb and is suitable for children and the elderly. See the image on the left to see how the Modum ladder unfolds in an emergency.

### Optional Extras

Sling for added stability  
Baby Harness

## Multi-Storey Houses

The Modum ladder is suited for two and three storey buildings. Longer ladders can be provided on request. Each escape window can have its own release station with a lock-pin, which allows the section of ladder below the window to be opened.

In case of a three storey building the person at the top floor can release the entire ladder while the person at the first floor can release just the section below him. The sections can be opened in any sequence.

The ladder is TÜV certified and GS marked and endorsed by a number of European insurers.

## Security Lock-Pins

Every release station is locked with a security lock-pin, which is pulled in an emergency. The pins are out of reach of unauthorised people on the ground and are shaped specifically to avoid tampering.

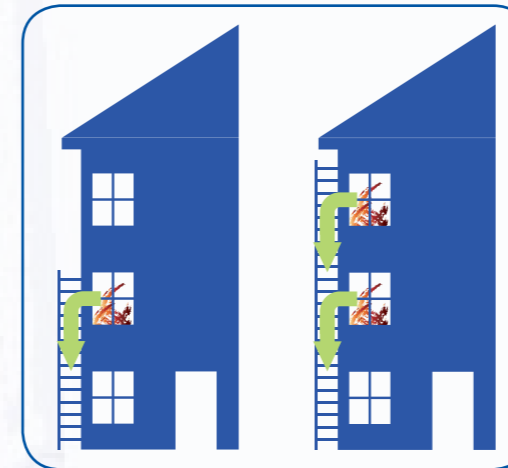

## Installation

The Modum ladder has been designed for easy self-installation. Each ladder comes with a free installation DVD describing every step of the installation. You can also request the free DVD prior to committing yourself to a purchase. This allows you to assess the possibility of a self-installation.

All fittings and special tools required for the installation are provided with the ladder. However, if you require a professional installation please contact your dealer for a quotation.

Multi release stations available to order
