

## Deedlock 1 Door Proximity Access Control kit

Access Control kit which provides access to a single door using a Proximity fob, each kit includes Power supply 12v DC 1amp with integral control unit, Proximity Reader, 10x Proximity Fobs and a Rim Electric release with optional Mortice faceplate. The Proximity reader is supplied with a 2 metre cable which can be extended up to 15 metres. The memory of the Control unit holds up to 999 fobs. Ideal for adding access control to an existing Rim or Mortice Nightlatch. Each Proximity Fob is added using the Master Fob and is then allocated a 3 digit number by the control unit, once programmed each fob can then be presented to the reader and the 3 digit number will then be displayed on the Controller PCB inside the Power supply. The number must then be marked on the fob and a written record of which number relates to each user kept for future reference. If a fob is lost or stolen it can be deleted from the memory using the Master fob and the allocated 3 digit number.

### **Kit Includes:-**

Boxed 12v DC 1amp Power supply c/w Controller  
Proximity reader (Mullion style)  
Rim Electric release & Mortice faceplate  
(for use with Nightlatches with Max. 12mm bolt throw)
