

OPERATION

Once the unit is fitted and the 24v DC (or 95MA) power is supplied, open the door to at least 90 degrees to activate the swing free action.

The door should now operate in swing free mode until either the fire alarm is activated, power is lost or the test switch is operated. When any of the above occurs the door will automatically close by the action of the door closer.

Follow the steps detailed in conjunction with the main fitting instructions leaflet (59010/INST) to fit the unit in swing free.

If you have a problem at any point, contact us on +44 (0)1543 460 040.
