The new CommandAlert by Commander®

*It's Loud, it's Bright, it's Wireless –
it's the future.*

Loud

When the alarm needs to be raised, not only do people have to hear it – it has to get through ear protection, past the noise of hammers and drills, and often over a significant distance. This unit packs an incredible 115dB alarm that ensures no matter where you are the alarm can be clearly heard

Bright

As well as being unbelievably noisy, this alarm has another way of alerting people – a super-bright LED strobe. It produces a brilliant, vibrant red flash every 2 seconds, and can clearly be seen even in broad daylight.

Radio Linkable

Need all the alarms to sound if one is operated? No problem. The optional radio-link module links unlimited units together and all units will sound when one is operated. And no complicated programming is required – just switch them on! The latest radio 'meshing' technology means no control panel is required - the units talk to each other, meaning massive versatility and potential range.

Tough

Designed from the very outset to be used outside in all winds and weathers, this unit is robust and completely waterproof. The ABS plastic is incredibly resistant to breaking, even in very cold weather.

Simple

The last thing any installer needs is a fiddly and complex unit to fit. Time is money. So you'll find this a refreshing change from the norm! The hinged door means you don't have any wiring to do on site – simply open the door, pop the screws in and you're all set!

CommandAlert Site Alarm

PRODUCT CODE
AE25

PRODUCT GROUP
Alarm Equipment

DIMENSIONS
170mm (w) x 250mm (h) x 80mm(d) (including
activation button and strobe/siren unit)

WEIGHT
670 grams

- Extremely loud 115dB siren
- 12-LED super-bright strobe
- IP65 rated
- ABS case resists shocks and drops
- Simple fitting and operation
- Radio link module available
