

Overhead door closers

CE26V

Variable size 2-6 rack and pinion closer

Application:

Perfect for small to heavy doors, in any configuration. The CE26V rack and pinion closer is easy to adjust between power size 2-6, offering great flexibility to the specifier and installer.

With adjustable power size and the reassurance of being CE and Certifire tested in all three fixing positions, the CE26V can be used in almost all applications. This provides significant site flexibility and reduces the need to hold lots of stock.

Offering adjustment up as far as power size 6, means this closer is ideal for larger or heavier doors.

Featuring 120 minute fire door testing, and fully tested backcheck the CE26V helps to protect buildings from fire and damage and is perfect for both new projects and refit applications.

Standards:

- CE marked and tested to BS EN 1154
