

Emergency Lighting test switches provide a cost effective solution to the testing of emergency luminaries. It is a requirement that all emergency luminaries are tested regularly so that an adequate level of illumination is given by the lamps under emergency conditions. This can be achieved by interrupting the supply to the luminaries at the distribution board. Our range of test switches can be used to simplify testing by providing local automatic switching.

---

## ELT10

This automatic key operated emergency lighting test switch is permanently wired to the emergency luminaire supply. The key switch is used to interrupt the supply for pre-programmed periods. At the end of the time period, the supply to the luminaries is automatically reinstated. The result is that there is no risk of depleting the batteries in the emergency fitting by leaving them connected for prolonged periods. The key switch ensures secure access.

---

## ELTD1

This single DIN rail module can be conveniently located at the distribution board or in a control panel.

	Description	Rating at 230VAC		Test Periods (Minutes)			
		Fluorescent	Compact Fluorescent	10	30	60	120
ELT10	Emergency lighting test switch	6A	3A	✓		✓	✓
ELTD1	DIN rail mounted Emergency lighting test switch	6A	3A	✓	✓	✓	✓

Please note: A single test switch is suitable for switching one circuit.
